Starting in August of 2025, Gender Tech Initiative Uganda (GTI-U) hosted our Spring Holiday ICT Bootcamp. The camp was held from the 26th of August through the 5th of September, and 12 students total were in attendance. 7 of the students attended the Bootcamp to learn graphics, and the remaining 5 students in attendance were there to learn Word Document. All 12 students in total were able to learn the basic skills they were in attendance for, and achieved their certificates of completion for the Spring Bootcamp.

Why learn Word Document? As one of the technological essentials in today's digital world, it comes as a necessity to students entering the digital. Word Document comes along with many benefits, some of which include:

- Being able to create assignments and reports
- Saving time with templates and styles
- Collaborating on group projects
- Being able to format documents professionally

To a similar degree, why is it beneficial to learn to use graphics? When entering the digital word, creativity is a large part of the experience. Being able to use graphics comes along with many benefits to both educational and professional spaces. Some of these benefits include:

- Making documents more engaging
- Helping explain complex ideas
- Supporting visual learning
- Capturing readers'/viewers' attention

Gender Tech Initiative Uganda is a non-profit organization dedicated to bridging the digital divide by empowering women, girls, and marginalized communities with digital literacy and safety skills. We envision a world where technology is inclusive, accessible, and transformative, enabling individuals to participate meaningfully in the digital economy and advocate for their rights.
