In May of 2025, Gender Tech Initiative Uganda (GTI-U) hosted our May Holiday ICT Bootcamp. The camp was held from the 12th through the 23rd of May, and 17 students were in attendance. Different from other bootcamps we have hosted, the May holiday Bootcamp was solely on teaching students Microsoft PowerPoint. Microsoft PowerPoint is an important digital tool for students to learn in benefit of their future careers and education for many different reasons. Some of them include improved communication through an organized and visually pleasing channel, facilitating collaboration, building professional skills, enhancing learning, and many more. GTI-U was grateful to have these 17 students in attendance, being able to guide them with Microsoft PowerPoint skills for the futures.

Microsoft PowerPoint can seem like a very complicated software application, but when broken down into the basic skills, learning how to use it is very attainable.

The basic Microsoft PowerPoint Skills Consist of:

- Creating a Presentation
- Adding and Organizing Slides
- Entering and Formatting Texts
- Inserting Visual Elements
- Applying Themes and Designs
- Adding Multimedia (videos and audio)
- Saving and Sharing

After learning these skills through the Bootcamp, the 17 students in attendance are now equipped with the necessary skills to use Microsoft PowerPoint.

Gender Tech Initiative Uganda is a non-profit organization dedicated to bridging the digital divide by empowering women, girls, and marginalized communities with digital literacy and safety skills. We envision a world where technology is inclusive, accessible, and transformative, enabling individuals to participate meaningfully in the digital economy and advocate for their rights.
